

Luna goes to CASA

It's Luna's first day at school and our hen is very excited. The first lesson is about gravity in space, a concept that seems complicated to her at first. But with a little dedication and focus, she discovers that it is really fun to learn new things about astronomy.

Subjects

Engineering (Visual-spatial intelligence)

Social skills introduced

Self-esteem

Further information

In kindergarten, kids can be familiarized with astronomical concepts such as gravity while playing: learning the difference between light and heavy objects and guessing which of these will touch the ground first. This type of educational games also stimulates kids' natural inclination to curiosity and discovery.

Suggested age

4-5 years

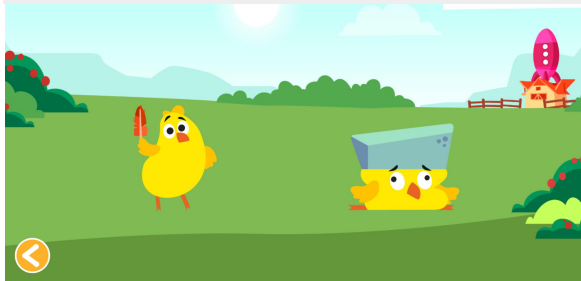

Difficulty of game

Learning objectives

- Dimension perception (heavy-light, big-small)
- Gravity

Touch the animal with the heavier/lighter object

Touch the animal with the heavier/lighter object

What object will land first?
Touch the object that is heavier
