

Luna goes to CASA

It's Luna's first day at school and our hen is very excited. The first lesson is about gravity in space, a concept that seems complicated to her at first. But with a little dedication and focus, she discovers that it is really fun to learn new things about astronomy.

Reading comprehension questions

1. When Luna's teacher arrives in the classroom, is he angry or happy?
2. What does Luna dream about?
3. If you pick up an object and let it go, will it go towards the floor or towards the ceiling?
4. Let's talk about gravity some more.

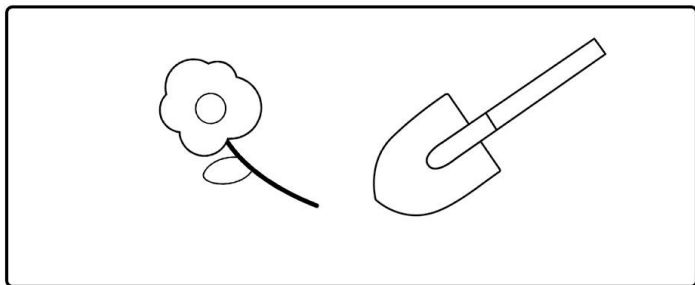

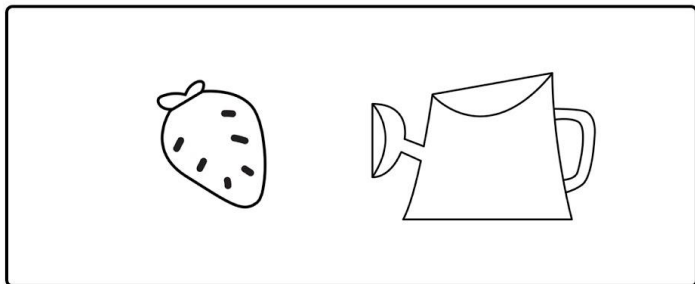

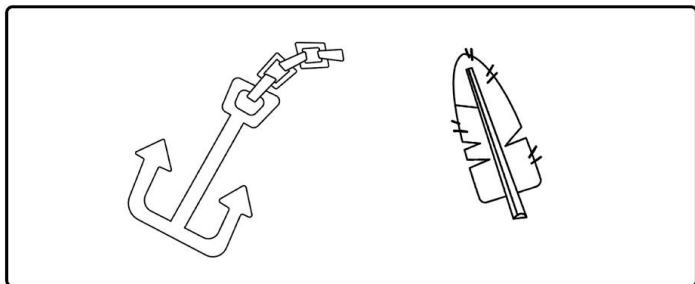

Ideas for activities

- Gravity experiment: make a hole at the bottom of a plastic cup and cover it with your finger. Fill the glass with water then remove your finger from the hole. This experiment shows how the water falls into a basin, while the glass does not as it is still held by the hand.

LIGHT OR HEAVY?

Circle the lighter object in each pair.

WHICH ANIMAL WEIGHS THE MOST?

Color the heavier animal.
